Preface

Social justice and equity are by themselves a strong argument for providing basic education for all. It is an established fact that basic education improves the level of human well-being especially with regard to life expectancy, infant mortality, nutritional status of children, etc. Studies have shown that universal basic education significantly contributes to economic growth.

Consequent to several efforts, India has made enormous progress in terms of increase in institutions, teachers, and students in elementary education. However, a sizeable proportion of the population of the children in the country still remains out-of-school.

This survey was commissioned by Educational Consultants India Limited with support from the Ministry of Human Resource Development to assess the number of out-of-school children across the nation. SRI – IMRB International was entrusted with the responsibility of conducting this survey.

We are extremely grateful to the Research Evaluation and Studies Unit of Technical Support Group for SSA Educational Consultants India Limited for providing us support at every stage of the survey. We would also extend our gratitude to various experts from ORGI, Ministry of HRD, and NCERT for extending their support towards the successful completion of the survey.

Special thanks are due to all the respondents who enthusiastically agreed to give us their valuable time and shared their views with us. Their contribution to this project has been invaluable.

We hope that the task that we set out to do has been accomplished and also that this document would serve as a valuable piece of information to the decision makers of the country.

Date: September, 2014

B6	Number of slum Households covered	44
SECTION 1: OUT OF SCHOOL CHILDREN		**51**
C1.1	State wise and Gender Wise Estimated number of children in age group 6-10, 11-13 and 6-13 – Rural	52
C1.2	State wise and Gender Wise Estimated number of children in age group 6-10, 11-13 and 6-13 – Urban	53
C1.3	State wise and Gender Wise Estimated number of children in age group 6-10, 11-13 and 6-13 – Rural + Urban	54
C2.1	Estimated number of out of school children by gender in age group 6-10, 11-13 and 6-13 years – Rural	55
C2.2	Estimated number of out of school children by gender in age group 6-10, 11-13 and 6-13 years – Urban	56
C2.3	Estimated number of out of school children by gender in age group 6-10, 11-13 and 6-13 years – Rural + Urban	57
C3.1	Estimated percentage of out of school children by gender in age group 6-10, 11-13 and 6-13 - Rural	58
C3.2	Estimated percentage of out of school children by gender in age group 6-10, 11-13 and 6-13 - Urban	59
C3.3	Estimated percentage of out of school children by gender in age group 6-10, 11-13 and 6-13 – Rural + Urban	60
C4.1a	State Wise Number of children by Religion in age group 6-13 years – Rural	61
C4.1b	State Wise Number of children by Social Group in age group 6-13 years – Rural	62
C4.2a	State Wise Number of children by Religion in age group 6-13 years – Urban	63
C4.2b	State Wise Number of children by Social Group in age group 6-13 years – Urban	64
C4.3a	State Wise Number of children by Religion in age group 6-13 years – Rural + Urban	65
C4.3b	State Wise Number of children by Social Group in age group 6-13 years – Rural + Urban	66
C5.1a	State Wise Number of out of school children by Religion in the age group 6-13 years - Rural	67
C5.1b	State Wise Number of out of school children by Social Group in the age group 6-13 years - Rural	68
C5.2a	State Wise Number of out of school children by Religion in the age group 6-13 years – Urban	69
C5.2b	State Wise Number of out of school children by Social Group in the age group 6-13 years - Urban	70
C5.3a	State Wise Number of out of school children by Religion in the age group 6-13 years – Rural + Urban	71
C5.3b	State Wise Number of out of school children by Social Group in the age group 6-13 years – Rural + Urban	72
C6.1a	Percentage children out of school by Religion among children aged 6-13 years - Rural	73
C6.1b	Percentage children out of school by Social Group among children aged 6-13 years - Rural	74
C6.2a	Percentage children out of school by Religion among children aged 6-13 years - Urban	75
C6.2b	Percentage children out of school by Social Group among children aged 6-13 years - Urban	76
C6.3a	Percentage children out of school by Religion among children aged 6-13 years – Rural+Urban	77
C6.3b	Percentage children out of school by Social Group among children aged 6-13 years – Rural+Urban	78
C7.1a	Gender wise Estimation of Children out of School by Religion Among Children aged 6-13 Years - Rural	79
C7.1b	Gender wise Estimation of Children out of School by Social Group Among Children aged 6-13 Years - Rural	80
C7.2a	Gender wise Estimation of Children out of School by Religion Among Children aged 6-13 Years - Urban	81
C7.2b	Gender wise Estimation of Children out of School by Social Group Among Children aged 6-13 Years - Urban	82
C7.3a	Gender wise Estimation of Children out of School by Religion Among Children aged 6-13 Years – All	83
C7.3b	Gender wise Estimation of Children out of School by Social Group Among Children aged 6-13 Years - All	84
SECTION 2: CHILDREN WITH SPECIAL NEEDS IN THE AGE GROUP 6-13 YEARS		**85**
C8	Total Children with Special Needs among children aged 6-13 years - All	86
C9	Total Out of School Children with Special Needs among children aged 6-13 years - All	87

Table	Details	Page No.
C10	Percentage of Out of School Children with Special Needs among children aged 6-13 years – All	88
SECTION 3: CHILDREN IN THE AGE GROUP 6-13 YEARS WHO DROPPED OUT FROM SCHOOL		**89**
C11	Total Number of Dropouts in the age group of 6-13	90
C12	Percentage of Out of School Children who are Dropouts	91
C13.1	Estimated Number of dropouts according to class completed before dropping out - Rural	92
C13.2	Estimated Number of dropouts according to class completed before dropping out - Urban	93
C13.3	Estimated Number of dropouts according to class completed before dropping out – Rural + Urban	94
C14.1	Estimated Percentage of children among dropouts according to class completed before dropping out - Urban	95
C14.2	Estimated Percentage of children among dropouts according to class completed before dropping out - Rural	96
C14.3	Estimated Percentage of children among dropouts according to class completed before dropping out – Rural + Urban	97
C15.1	Estimated Number of dropouts according to gender and class completed before dropping out – Rural	98
C15.2	Estimated Number of dropouts according to gender and class completed before dropping out – Urban	99
C15.3	Estimated Number of dropouts according to gender and class completed before dropping out – Rural + Urban	100
C16.1	Estimated Percentage of dropouts according to gender and class completed before dropping out - Rural	101
C16.2	Estimated Percentage of dropouts according to gender and class completed before dropping out - Urban	102
C16.3	Estimated Percentage of dropouts according to gender and class completed before dropping out – Rural + Urban	103
SECTION 4: CHILDREN IN THE AGE GROUP 6-13 YEARS WHO NEVER ATTENDED SCHOOL		**104**
C17a	Number of out of school children in the age group 6-13 years who never enrolled in school	105
C17b	Number of out of school children in the age group 6-13 years who enrolled in but never attended school	106
C18a	Percentage of out of school children in the age group 6-13 years who never enrolled in school	107
C18b	Percentage of out of school children in the age group 6-13 years who enrolled in but never attended school	108
SECTION 5: OUT OF SCHOOL CHILDREN (Parents' Education)		**109**
C19.1	Gender Wise and Parents' Education wise Estimated Percent Out of School among Children aged 6-13 Year (Father)	110
C19.2	Gender Wise and Parents' Education wise Estimated Percent Out of School among Children aged 6-13 Year (Mother)	111
SECTION 6: OUT OF SCHOOL CHILDREN (LIVING IN SLUM AREAS)		**112**
C20.1	Percentage of Out of school children living in Slum areas - Male + Female	113
C20.2	Percentage of Out of school children living in Slum areas - Male	114
C20.3	Percentage of Out of school children living in Slum areas - Female	115
SECTION 7: REASONS FOR OUT OF SCHOOL CHILDREN & CHILDREN WHO DROPPED OUT FROM SCHOOL		**116**
C21	Reasons for Out of school	117
SECTION 8: CHILDREN IN THE AGE GROUP 6-13 YEAR ATTENDING SCHOOL		**118**
D1.1	Estimated number of children of age group 6-13 years attending different types of school – Rural	119
D1.2	Estimated number of children of age group 6-13 years attending different types of school – Urban	120
D1.3	Estimated number of children of age group 6-13 years attending different types of school – Rural + Urban	121
D2.1	Estimated Percentage of children of age group 6-13 years attending different types of school – Rural	122
D2.2	Estimated Percentage of children of age group 6-13 years attending different types of school – Urban	123
D2.3	Estimated Percentage of children of age group 6-13 years attending different types of school – Rural + Urban	124
D3.1	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Male (Rural)	125
D3.2	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Female (Rural)	126
D3.3	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Male (Urban)	127
D3.4	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Female (Urban)	128
D3.5	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Male (Rural + Urban)	129
D3.6	State wise and Gender Wise Estimated number of children attending different type of school among children aged 6-13 – Female (Rural + Urban)	130
D4.1	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Male (Rural)	131
D4.2	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Female (Rural)	132

Table	Details	Page No.
D4.3	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Male (Urban)	133
D4.4	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Female (Urban)	134
D4.5	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Male (Rural + Urban)	135
D4.6	State wise and Gender Wise Estimated Percentage of children attending different type of school among children aged 6-13 – Female (Rural + Urban)	136
D5.1	State wise Estimated number of children Enrolled in different Classes among Children aged 6-13 years - Rural	137
D5.2	State wise Estimated number of children Enrolled in different Classes among Children aged 6-13 years – Urban	138
D5.3	State wise Estimated number of children Enrolled in different Classes among Children aged 6-13 years – Rural + Urban	139
D6.1	State wise Estimated Percentage of children Enrolled in different Classes among Children aged 6-13 years - Rural	140
D6.2	State wise Estimated Percentage of children Enrolled in different Classes among Children aged 6-13 years – Urban	141
D6.3	State wise Estimated Percentage of children Enrolled in different Classes among Children aged 6-13 years – Rural + Urban	142
D7.1	State wise and Gender Wise Estimated number of children Enrolled in different classes among children aged 6-13 – Male (Rural)	143
D7.2	State wise and Gender Wise Estimated number of children number of children Enrolled in different classes among children aged 6-13 – Female (Rural)	144
D7.3	State wise and Gender Wise Estimated number of children number of children Enrolled in different classes among children aged 6-13 – Male (Urban)	145
D7.4	State wise and Gender Wise Estimated number of children number of children Enrolled in different classes among children aged 6-13 – Female (Urban)	146
D7.5	State wise and Gender Wise Estimated number of children number of children Enrolled in different classes among children aged 6-13 – Male (Rural + Urban)	147
D7.6	State wise and Gender Wise Estimated number of children number of children Enrolled in different classes among children aged 6-13 – Female (Rural + Urban)	148
D8.1	State wise and Gender Wise Estimated Percentage of children number of children Enrolled in different classes among children aged 6-13 – Male (Rural + Urban)	149
D8.2	State wise and Gender Wise Estimated Percentage of children number of children Enrolled in different classes among children aged 6-13 – Female (Rural + Urban)	150

List of Abbreviations

CWSN	Children with Special Needs
EGS	Education Guarantee Scheme
HH	Household
HoH	Head of Household
MP	Madhya Pradesh
NCERT	National Council of Educational Research and Training
NCT	National Capital Territory
NSS	National Sample Survey
OBC	Other Backward Classes
OOS	Out of School
PPS	Probability Proportional to Size
PSU	Primary Sampling Unit
ORGI	Office of Registrar General of India
RTE	Right to Education
SC	Scheduled Caste
SRSWOR	Systematic Random Sampling Without Replacement
SSA	Sarva Shiksha Abhiyan
ST	Scheduled Tribe
UEE	Universalization of Elementary Education
UP	Uttar Pradesh
UT	Union Territory

The third round of the sample survey of households was conducted in all the States and Union Territories of India during 2014. The sampling frame for this round was the latest available census data (census 2011). All the 640 districts as per census 2011 were covered in this round.

The following findings are based on the data collected from a sample of **99,929 households** within 5005 PSUs (villages and urban wards).

The estimated total number of children in the age group of 6-13 years is 20.41 Crores, out of which, an estimated **60.41 lakhs (2.97%) are out of school**. The proportion of out of school in this round is estimated to be lower than both the previous rounds, 2009 (4.28%), and 2006 (6.94%).

The highest proportion of out of school children within 6-13 years is estimated in the East zone (4.02%) and the lowest within South zone (0.97%). **Odisha has the highest proportion of out of school children in India (6.10%).**

At a national level, a higher proportion of females (3.23%) are out of school than males (2.77%). Also, more children from **rural areas (3.13%)** are out of school than from **urban areas (2.54%).**

A religion wise disaggregation reveals that out of the total estimated **Muslim children** in the country, **4.43% are out of school.** This proportion is lower than the last round where 7.67% Muslims were estimated to be out of school.

The study also reveals that a higher proportion of ST children are out of school than any other social category. In this round, **4.36% ST children** are estimated to be out of school. This is lower than the last round where 5.60% ST children were out of school.

Disability estimates reveal that in the age group of 6-13 years, **1.05% children suffer from one or the other type of disability**. Following the trend observed in the last round, out of school children among the disabled population remain much higher than the national average. This round's findings show that an estimated **28.07% children with special needs are out of school**. This stood at 34.12% in the last round.

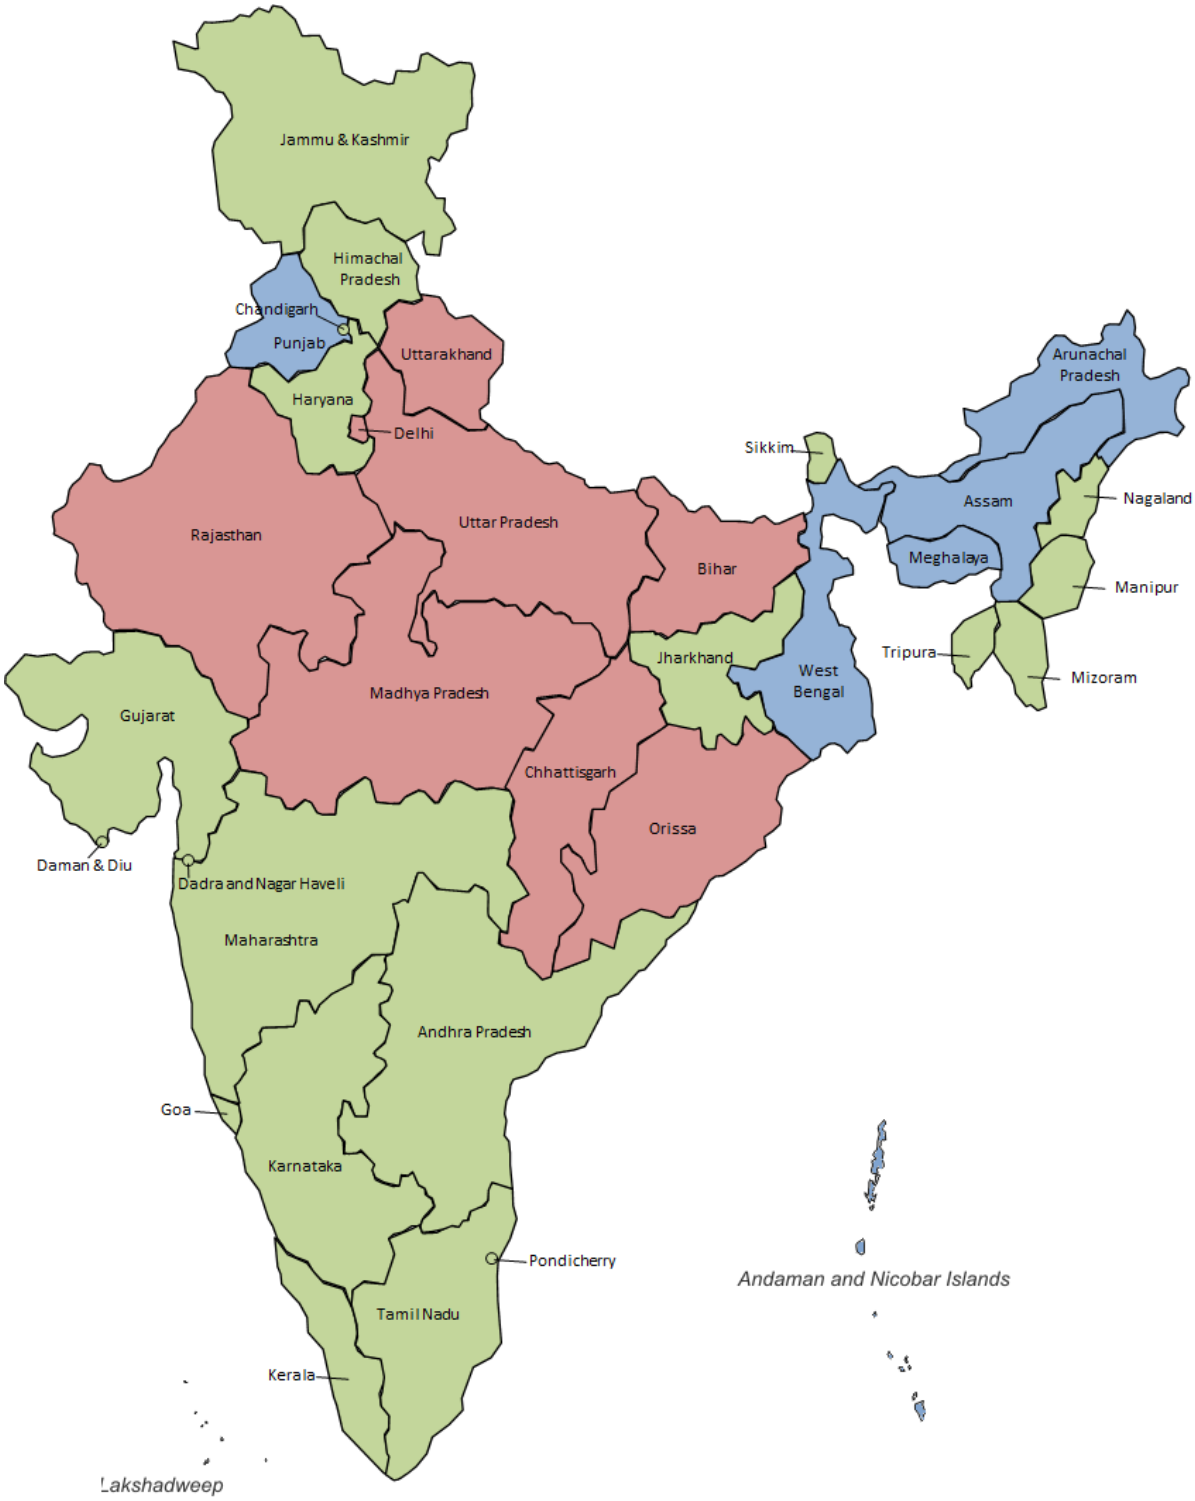
An estimated 1.12 Crore children from urban India live in slum areas. This is 36.01% of the total urban population. Out of the total children living in **slums in the urban areas, 2.14% are out of school**. This is lower than the previous round, where 3.74% of the slum population were out of school.

Maximum children who are out of school have never been enrolled in any school recognised under RTE. This is closely followed by those who have dropped out after successfully completing some class. This study reveals than the **maximum dropouts in this age group are after class 2.**

As observed in the last round as well, p**overty/Economic Reason** is cited by majority of HoHs in households having an out of school child. **Child not interested in studies** is also frequently cited as a reason for dropping out of school. Disability or poor health is the most common reason for being out of school among CWSN.

Among the children who are attending school, almost **three-fourths are enrolled a government/local body school**. This proportion is lower within urban areas.

Percentage of out of School Children in India



Out of School Children >3.14%

Out of School Children between 2.98% to 3.13%

Out of School Children below National Average (<2.97%)

This section details out the key findings of the study at a National Level. The data has been disaggregated by location (urban & rural), gender, age group, social group, religion, and type of disabilities. Furthermore, a comparison of the current findings (2014) with the 2009 and 2005 round of the Out of school survey has been provided under the following section.

The following table presents the overview of the findings at an All India level at various levels of disaggregation.

Table A 1: All India Snapshot – 2014

S.no	Details	Estimated Child population (6-13 years)			Estimated Number of Out of School Children			Percentage of Out of School Children		
		Rural	Urban	Total	Rural	Urban	Total	Rural	Urban	Total

*Includes No Response for type of disability

At the National level, out of an estimated 20.41 crore children in the age group 6-13 years an estimated 60.64 lakh children are out of school. This accounts for 2.97% of the total children in the said age group across all states and UTs in India. Percentage of out of school children in the 6-13 years age group has considerably reduced from 2009 (4.53%) and 2005 (6.94%).

Disaggregation reveals that a higher percentage of children in the rural areas (3.13%) are out of school as compared to those in the urban areas (2.54%). This is found to be in line with the trend observed in the previous two rounds. The findings from this round reveal that in the age group of 6-13 years, an estimated 46.95 lakh children are out of school in Rural India and an estimated 13.69 lakhs children are out of school in Urban India. It is noteworthy that the out of school children in Urban India have increased from the last (2009) round when they were estimated to be 11.26 lakh.

A gender wise disaggregation reveals that 31.66 lakh males and 28.98 lakh females are estimated to be out of school. In proportion, 2.77% of the estimated male population (11.44 crore) and 3.23% of the estimated female population (8.97 crore) are out of school, i.e., a higher percentage of females (as compared to males) are out of school in the 6-13 years age group. This is similar to the findings of the last round of the survey where 3.92% male and 4.71% female children were estimated to be out of school among children aged 6-13 years.

Among the two age groups, i.e. 6-10 years and 11-13 years, it is observed that estimated percentage of out of school children is higher in the age group 11-13 years (3.28%) as compared to 6-10 years (2.77%). In the last round as well, compared to 5.25% children being out of school in the age group of 11-13 years, 3.69% of children aged 6-10 years were out of school.

Religion wise analysis reveals that Muslims have the maximum proportion of out of school children in India (4.43%), followed by Hindus (2.73%), Christians (1.52%) and Others (1.26%).

Disaggregation by Social Group shows that the maximum proportion of out of school children in India is within Scheduled Tribes (4.20%), followed by Scheduled Castes (3.24%), OBC (3.07%) and Others (1.87%).

An estimated 21.39 lakh children (1.05%) in the age group of 6-13 years have been identified as Children with Special Needs (CWSN). Among the CWSN aged 6-13 years, 5.94 lakh children are out of school. This translates into 28.23% of the CWSN to be out of school. Analysis of out of school by type of disabilities reveals that 44.13% of those suffering from multiple disabilities (more than one type of physical or mental disability or both) are out of school. Out of the total children suffering from any mental disability, 35.97% children, and those suffering from speech disability, 34.82% children are out of school.

When compared with the previous rounds of the study to observe the magnitude of change among the out of school children, findings reveal that at an overall level, the percentage of out of school children aged 6-13 years has decreased from 4.28% in 2009 study and 6.94% in 2005 study to 2.97% in this round. The decline in the rural areas is slightly higher than in the urban areas of the country.

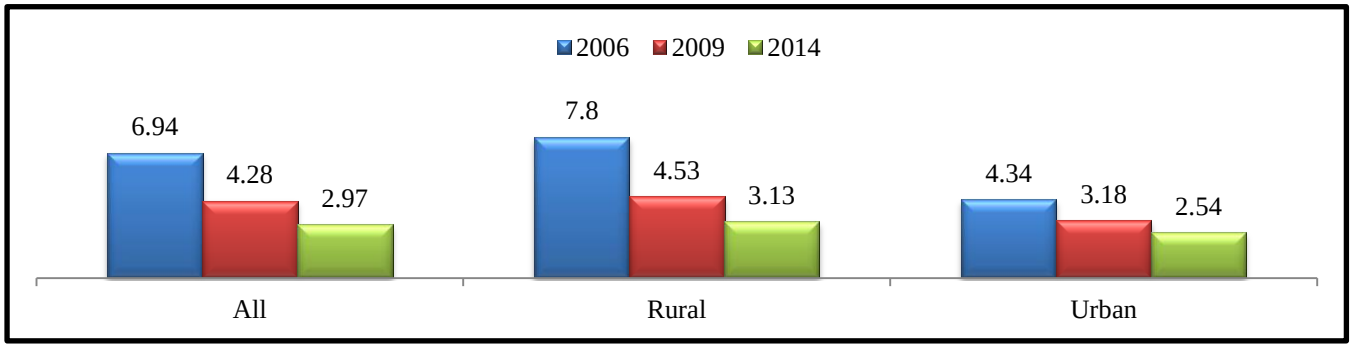

Figure 1. 1: Percentage Out of School children by Location

Disaggregating age wise, a sharper decline from the previous two rounds of the study has been observed in the older age group of 11-13 years. The percentage of out of school children in this group has decreased from 5.23% in 2009 to 3.28% in 2014. A decline in percentage of out of school children has also been observed in the 6-10 years age group from 3.69% in 2009 to 2.77% in 2014.

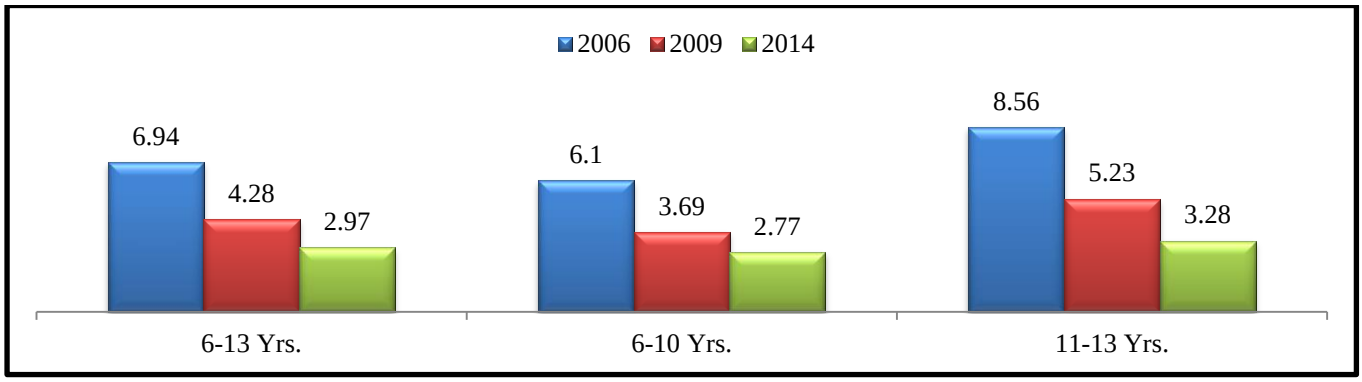

Figure 1. 2: Percentage of Out of School Children by Age Group

Highlighting the gender dichotomy in India, a higher proportion of female children (3.23%) in the age group of 6-13 years are estimated to be out of school as compared to male children (2.77%). This is a trend similar to what has been observed in the last two rounds with 4.71% female and 3.92% male children out of school in 2009, and 7.92% female and 6.18% male children out of school in 2005.

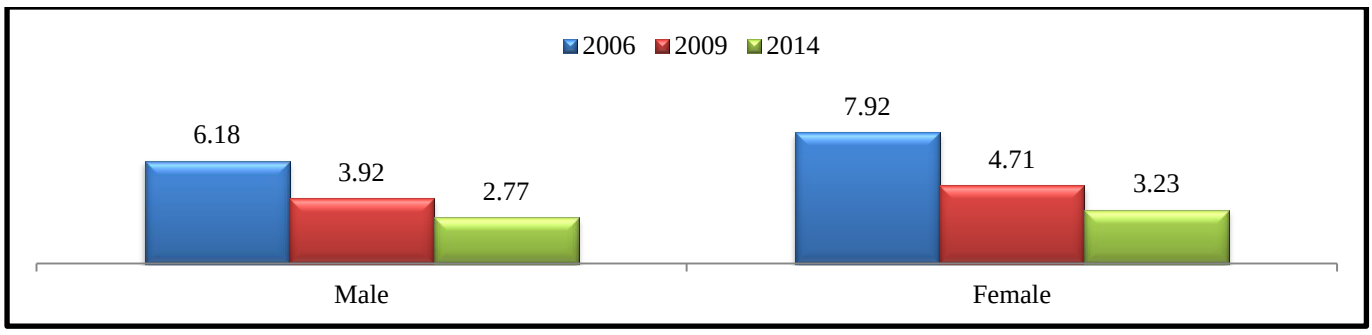

Figure 1. 3: Percentage of Out of School Children by Gender

1.1 Context of the Survey

Sarva Shiksha Abhiyan (SSA) is a Government of India's flagship programme launched in 2001 for achievement of Universalization of Elementary Education (UEE) in a time bound manner, as mandated by 86th amendment to the Constitution of India making free and compulsory Education to the Children of 6-13 years age group (i.e., those above 6 years but below 14 years) a Fundamental Right. SSA is being implemented in partnership with State Governments to cover the entire country and address the needs of 200 million children in nearly 2 million habitations. The programme seeks to open new schools in those habitations which do not have schooling facilities and strengthen existing school infrastructure through provision of additional class-rooms, toilets, drinking water, maintenance grant and school improvement grant. SSA has a special focus on girls' education and children with special needs.

The objectives of SSA include:

- All children should attend school or an Alternative school such as an EGS centre or 'Back-to-School' camp
- All children should complete five years of primary schooling
- All children should complete eight years of elementary schooling
- Focus on elementary education of satisfactory quality with emphasis on education for life
- Bridge all gender and social category gaps at primary stage and at elementary education level
- Universal retention

Though SSA has been designed to provide elementary education to children in the age group of 6-13 years, there still exist a large number of out-of-school children in many states in this age group. The first All India Survey of out-of-school children in the 6-13 years age group was conducted in 2005-06 and the second in 2009-10. After 3 years of second Survey, in view of the legal mandate for providing school education to every child in the age group 6-13, the need was felt again to assess the number and percentage of children in this age group who are still out of school. Hence, through Ed.CIL, the Ministry of Human Resource Development decided to get a nation-wide sample survey conducted to assess the number of out-of-school children in the country. SRI – IMRB International was the agency entrusted with carrying out the survey in every state and UT (Union Territory) in 2014.

1.2 Objectives of the Survey

The primary objectives of the survey were:

(i) To estimate state-wise child population and to provide estimates of number and percentage of children who are out of school by sex, social class, religion, age (single year age as well as age groups 6-10,11-13 and 6-13) separately for rural and urban areas and for Children (of different categories) With Special Needs.

(ii) To provide estimates of number and percentage of children attending different types of school or are enrolled in Special Training Programmes envisaged under RTE Act.

(iii) To provide estimates of number and percentage of school going children enrolled in different grades

(iv) To provide estimates of number and percentage of (a) dropouts and (b) those who never went to school among the out-of-school children belonging to different categories.

(v) To find out the reasons of not attending school or dropping out from school in the case of out-of-school children.

1.3 Layout of the report

The first chapter helps understand the context of the survey, its objectives and limitations. The second chapter explains the concepts and definitions that were employed for the purpose of this survey. Chapter three outlines the sample design and estimation procedure. The subsequent chapters' viz., chapter 4 and 5 report the findings of the survey. Chapter 4 provides an overview of some background characteristics of the sampled households. Chapter 5 discusses some key characteristics of out-of-school children. This chapter also discusses characteristics of those attending school in terms of type of school attended and on the estimated class wise dropouts and their percentage.

1.4 Limitations of the Survey

The list of Villages and Urban Wards from the latest available census (2011) served as the Primary Sampling Unites for the survey. The list of primary sampling units from census 2011 was used as sampling frame. (i) ***Table A4 presents number of villages and census wards included in the survey in each state and UT.*** The sample size was calculated at a zone level and was distributed among all states of the zone in proportion of population of the state to the zone resulting in fewer sample within the smaller states which was manually adjusted to a minimum level to cover every district. (ii) The results are estimated using census 2011 population. Hence, the accuracy of the estimated numbers of children as well as of in-school and out of school children depends on the accuracy in estimation of population in the age group 6-13. (iii) Certain areas in Chhattisgarh and Assam, which were a part of the initial selection, had to be replaced due to security reasons.

Children with special needs have been covered in this survey with a higher probability of selection, however, the study remains insufficient to estimate the number and proportion of disabled out of school children due to underlying hesitation of respondents to reveal information for such children. It is therefore proposed that an in-depth study be done to cover the CWSN and estimate the numbers of out of school children among them.

Slum population has been covered with a higher probability in this study but due to the lack of the slum population within the sampling frame, this cannot be included accurately in the estimation procedure.

The concepts and definition used in the survey are broadly classified as (a) terms used for sampling (b) used for categorization of children with special needs (c) Other important definitions

2.1. Terms used for Sampling

1. **Habitation Group:** In village, there exist usually a few localities or pockets where the houses of the village tend to cluster together. These are called 'habitation group'. Large habitation group may be divided artificially to achieve more or less equal population content for the purpose of habitation group formation.

2. **House:** Every Structure, tent, shelter, etc. is a house irrespective of its use. It may be used for residential or non-residential purpose or both or even may be vacant.

3. **Households:** A group of persons normally living together & taking food from a common kitchen constituted a household. The members of a household may or may not be related by blood or marriage to one another. The following cases were noted while determining the group of persons to be considered as households for the current survey:
    - Each inmate (including residential staff) of a hostel, mess, hotel, boarding & lodging house, etc., will constitute a single member household. If, however, a group of persons among them normally pool their income for spending, they together will be treated as forming a single household. For example, a family living in a hostel will be treated as a separate single household by itself.
    - Under-trial prisoners in jails & indoor patients of hospitals, nursing homes etc., are to be excluded, but residential staff will be listed while listing is done in such institutions. The persons of the first category will be considered as normal members of their parent household & will be counted there. Convicted prisoners undergoing sentence will be outside the coverage of the survey.
    - Floating population, i.e. persons without any normal residence will not be listed. But household residing in open space, roadside shelter, under a bridge etc., more or less regularly in the same place will be listed.
    - Foreign nationals will not be listed, nor do their domestic servants, if by definition the latter belong to the foreign national's household. If, however, a foreign national becomes an Indian citizen for all practical purposes, he/she will be covered.
    - Persons residing in barracks of military & paramilitary forces (Like police, BSF, etc.) will be kept outside the survey coverage for difficulty in conduct of survey therein. However, civilian population residing in their neighborhood, including the family quarters of services personnel are to be covered, for which, of course, permission may have to be obtained from appropriate authorities.
    - Orphanages, rescue homes, ashrams & vagrant houses are outside the survey coverage due to lack of a pre-defined universe and hence, the sampling frame in these habitations. However, the persons staying in old age homes, the students staying in ashram/hostel & the residential staff (other than monks/nuns) of these ashrams may be listed. For orphanages, although orphans are not to be listed, the persons looking after them & staying there may be considered for listing.

4. **Household size:** the number of normally resident members of a household is its size. It includes temporary stay-away (those whose total period of absence from the household is expected to be less than 6 months) but excludes temporary visitors & guests (expected total period of stay less than 6 months). Even though the determination of the actual composition of a household was left to the judgment of the head of the household, the following procedures was adopted as guidelines:

    - In deciding the composition of the household, more emphasis to be placed on 'normally living together' than on 'ordinary taking food from a common kitchen'. He/she will be treated as a member of the household with whom he or she resides.
    - When a person sleeps in one place (say, in a shop or in a room in another house because of space shortage) but usually takes food with his or her family, he/she should be treated not as a single member household but as a member of the household in which other members of his or her family stay.
    - If a member 0f household (say, a son or a daughter of the head of the household) stays elsewhere (say, in hostel for studies or any other reason), he/she will not be considered as a member of his/her parent's household. However, he/she will be listed as a single member household if the hostel is listed.

5. **No. of members in the HH:** The total number of persons including children and babies in the HH. The children studying in boarding schools were also considered for computation of total members in the HH. All the children who were working away from their villages, for earning money, were counted as a part of the parents' house

6. **Head of the HH:** The head of household is a person who is of at least 18 years of age and who is recognized as such by the household. She or he is generally the person who bears the chief responsibility for managing the affairs of the household and takes decision on behalf of the household. The head of household need not necessarily be the oldest male member or an earning member, but may be a female or a younger member of either sex. In case of an absentee de jure 'Head' who is not eligible to be enumerated in the household, the person on whom the responsibility of managing the affairs of household rests was to be regarded as the head irrespective of whether the person is male or female. Head of the HH was interviewed in the study

7. **Literate:** A person is considered literate if he/she can read and write a simple sentence in any language with understanding

8. **Social group:** Head of household is classified as SC (Schedules Castes), ST (Scheduled Tribes) & OBC (Other Backward Classes) and others. Unlike previous rounds, Muslims were covered under a separate category (Religion) and they were further analyzed as social group ST, Others etc.

9. **Religion:** Head of household is classified as Hindu, Muslim, Christian and Others based on the religion by which they identify themselves

10. **Slum Households:** Households are referred to as slum houses if cluster of houses are identified as slum in cities

2.2. Categorization of children with special needs (CWSN)

The children having some different ability belong to five categories. The criteria used for classifying them by type of different ability are described below-

Different Ability: *A person with restrictions or lack of abilities to perform an activity in the manner or within the range considered normal for a human being was treated as having different ability. It excludes illness/injury of recent origin (morbidity) resulting into temporary loss of ability to see, hear, speak or move*

Note *– There could be cases where the wards were not aware of the existing different ability with their children or they might not want to disclose this to the investigator. To avoid incorrect reporting a list of important questions, pertaining to each different ability, were identified. The answers to these questions helped to identify the existence of any of the below mentioned different abilities.*

The types of different abilities have been further classified as follows:

1. **Mental:** Persons who have difficulty in understanding routine instructions, who could not carry out their activities like others of similar age or exhibited behaviours like talking to self, laughing / crying, staring, violence, fear and suspicion without reason were considered as mentally disabled for the purpose of the survey. The "activities like others of similar age" included activities of communication (speech), self-care (cleaning of teeth, wearing clothes, taking bath, taking food, personal hygiene, etc.), home living (doing some household chores) and social skills

   The questions posed are:

   1. Does the child have severe illness before the age of 5?
   2. At the age of 6, does the child have problem in undertaking the following activities:
      a. Toilet independently
      b. Eat independently
      c. Dress independently
   3. Does the child exhibit problems in expressing his needs in clear language like his other peers?
   4. Did the child start sitting/standing/walking/crawling late as compared to others of his/her age?

2. **Visual:** By this, it is meant, loss or lack of ability to execute tasks requiring adequate visual acuity. For the survey, visually disabled included (a) those who did not have any light perception - both eyes taken together and (b) those who had light perception but could not correctly count fingers of hand (with spectacles/contact lenses if he/she used spectacles/contact lenses) from a distance of 1 meters in good day light with both eyes open. Night blindness was not considered as visual disability

   The questions posed are:

   1. Does the child have difficulty in counting the fingers of an outstretched hand at a distance of one meter?
   2. Does the child move his/her head towards the source of light?

3. Does the child stumble over objects or bump into people?

3. **Hearing:** This referred to persons' inability to hear properly. Any kind of problem in hearing or hearing loss can be associated with a hearing disability. Hearing disability is the inability of a child to hear speech and environmental sounds. This may be due to improper development of the ear or damage or disease to any part of the hearing system at birth or later. A child with a hearing problem may look lost, favour one ear for listening or may answer questions irrelevantly. It is therefore important to look for such signs that may indicate hearing loss in a child

   The questions posed are:

   1. Does the child favour one ear for listening purposes?
   2. Does the child tune the TV/Radio too loud?
   3. Is the child unable to respond when you call from the other room?
   4. Is there a discharge from the ear of the child?

4. **Speech:** This refers to persons' inability to speak properly. Speech of a person is judged to be disordered if the person's speech is not understood by the listener. Persons with speech disability include those who cannot speak, speak only with limited words or those with loss of voice. It also includes those whose speech is not understood due to defects in speech such as stammering

5. **Orthopedic/Locomotors:** A person with - (a) loss or lack of normal ability to execute distinctive activities associated with the movement of self and objects from place to place and (b) physical deformities, other than those involving the hand or leg or both, regardless of whether the same caused loss or lack of normal movement of body – is considered as disabled with locomotors disability. Thus, persons having locomotors disability included those with (a) loss or absence or inactivity of whole or part of hand or leg or both due to amputation, paralysis, deformity or dysfunction of joints which affected his/her "normal ability to move self or objects" and (b) those with physical deformities in the body (other than limbs), such as, hunch back, deformed spine, etc. Dwarfs and persons with stiff neck of permanent nature who generally did not have difficulty in the normal movement of body and limbs are also treated as disabled.

The questions posed are:

   1. Does the child have difficulty in moving or using any part of the body?
   2. Does the child limp or has difficulty in moving his hands?
   3. Does the child walk with jerks?
   4. Does the child have tremors?

6. **Multiple:** Persons with more than one type of the above mentioned different abilities

2.3. Other Important Definitions

1. **Age of child:** The survey covered children who have completed 6 years but not completed 14 years were covered under the study. The completed age was taken as on 1.1.2014. This had been taken in accordance with the RTE act Chapter 2 Sec 3(1) that says "Every child of the age of 6-14 years shall

have a right to free and compulsory education in the neighborhood school till completion of elementary education

2. **Attending:** A child has been considered as attending if he/she is enrolled in one of the following types of schools and who was not absent for more than 45 working days at a stretch

   i. **Government Schools:** A school was defined as a government school if it is provided funding from the central govt. or state govt. or municipality. Also included under this category were schools funded by the defence, railways or autonomous bodies like Kendriya Vidyalaya / Navodaya Vidyalaya. All children attending these schools are categorized as **'*attending school*'**

   ii. **Private Schools**: All schools other than Government schools which are run by private individuals /organizations are considered for this category. This included both recognized and unrecognized schools. All children attending these schools are categorized as **'*attending school*'**

   iii. **Recognized Madrasa:** These are Madrasa recognized either by State Minority Board of Education or by State Madrasa Boards. In these Madrasa, children are taught mathematics, environmental science (EVS) and a language according to the state curriculum in addition to Mazhabi/religious education. Only recognized madrasa are coded under this category. Children studying in these are classified as **'*attending school*'**

   iv. **Other Madrasa/Maktab (offering general education also):** These are second type Maktab / Madrasa which are not recognized by any of the above mentioned Boards. They impart not only religious education but teach other subjects too. They may be receiving support under SSA programme by way of training the qualified maulavis / janabs (teachers) in teaching of mathematics and EVS. Children studying in these Madrasa are categorized as **'*attending school*''**

   v. **Sanskrit Pathshala (children taught mathematics & EVS & other subjects) :** These are generally recognized by state Sanskrit Boards. Students in these schools are taught mathematics and EVS along with the language. Children studying in these are classified as **'*attending schoo*l'**

   vi. A child of the age 6 and above, who attends a pre-primary (**Nursery or Kindergarten**) class in any school treated as ***'attending school'***.

   vii. A child attending school run by Tribal/Social Welfare Department: There are some schools organized and managed by tribal/social welfare department of central/state government. Students in these schools are taught mathematics and EVS. Children studying in these are classified as **'*attending schoo*l'**.

   viii. **Other Schools (Education Guarantee Scheme (EGS) schools/ Bridge Course/Alternative Schools):**

      - **Education Guarantee Scheme (EGS) Centres**: Centres under EGS are functioning on almost the same lines as other government schools except that they are single teacher schools

and service conditions of teachers of these schools are different from those of government/local body schools. Children studying in these schools are categorized as 'attending school'. These schools are known by different names in different states

- **Centres conducting Bridge Course**: These courses are short term residential as well as non-residential courses meant for children who were either never enrolled or left studies in between. The non-residential schools have flexible time table as per the convenience of the children. Both are popularly known as **Alternative & Innovative Education (AIE) Centres**. Children studying in these centers are categorized as 'attending school'. These centers are also known by different names

3. **Out of school children:** A child is categorized as 'out of school' if the child is either not enrolled or has been absent for more than **45 working days** or has discontinued studies from the schools mentioned above

   The definition of RTE under Chapter 2 Sec 3(1) says "Every child of the age of 6-14 years shall have a right to free and compulsory education in the neighborhood school till completion of elementary education." Thus, the children would be considered as not attending schools if they receive education from following-

   - The child is studying in the Maktabs (Madrasa)/ Sanskrit Pathshalas imparting only religious education.
   - The child is attending Balwadi and Aganwadi
   - The child is attending Sanskrit Pathshalas where children are not taught mathematics, EVS & other subjects
   - The child is studying through correspondence course
   - The child is studying in Gompa

   i. **Dropouts**

   A child is classified as dropouts if she/he discontinued her/his studies in past or was absent for more than **45 working days** from school.

   ii. **Enrolled but Never Attended**

   It includes students who were enrolled in one of the schools described under the **"Attending"** section but never attended the same.

   iii. **Never Enrolled**

   It includes those children who were never enrolled in any school of the type described under the **"Attending"** section

Attending school	Not attending school
The following children are considered as attending schools who receive education from the following: i) Government Schools/Ashram schools/Kasturba Gandhi Vidyalaya/Private Schools ii) Recognized Madarassa iii) Other Madarassa/Maktab (offering general education also) iv) Sanskrit Pathshalas (children taught mathematics & EVS & other subjects v) Nursery or Kindergarten in any school vi) Tribal/Social Welfare Dept. vii) Education Guarantee Scheme (EGS) schools/ Bridge Course/Alternative Schools	The following children are considered as not attending schools who receive education from the following: i) Other Madarassa/Maktab (offering only religious education) ii) Sanskrit Pathshalas (children are not taught mathematics & EVS & other subjects) iii) Correspondence Course iv) Balwadi or Anganwadi v) Gompa

Long absence of maximum **45 working days** due to illness of self or a family member / engagement in seasonal activities / temporary migration, was ignored when the likelihood of child's rejoining the school is strong. In such a case, the child was treated as 'attending school'.

4. **Discrimination:** Discrimination is an action or practice that excludes, disadvantages, or merely differentiates between individuals or groups of individuals on the basis of some ascribed or perceived trait. For the current study, three types of discrimination will be considered-

   - Discrimination based on **caste** of a child
   - Discrimination based on **religion** of a child
   - Discrimination based on **gender** of a child

   Some examples of discrimination are-

   - *A child being asked to sit at the back of the class due to his/her caste/religion/gender*
   - *A child being asked to take up cleaning/menial work in the school due to his/her caste/religion/gender*
   - *A child being asked to sit and eat separately during lunch due to his/her caste/religion/gender*
   - *A child being forbidden from participating in schools events due to his caste/religion/gender*
   - *A child being forced to leave the school based on his caste/religion/gender*
   - *A child being scolded/punished using stereotypes of caste/religion/gender*
   - *A child being given corporal punishment because of his/her caste/religion/gender*

3.1. Sample Design

A three stage stratified sample design was adopted for this survey Primary Sampling Units (PSUs) being villages in rural areas and census wards in urban areas.

Sampling Frame: The sampling frame used for primary Sampling units in rural and urban areas is the list of villages and wards given by census 2011.

Sample Size: In this survey, 5005 urban and Rural Primary Sampling units were covered. All districts in each of the states and union territories were selected for the survey. This has been further divided among the 6 zones to provide a statistically significant sample with 95% Confidence and 10% Relative Precision and accommodating for a 5% margin for non-response.

The zonal sample size is further divided among the states corresponding to each zone based on the proportion of population of children age 6-13 in the state. To divide the overall state sample among the districts, they were divided as falling within each state in two strata. Stratum 1 had all the districts having SC+ST population greater than 50% and Stratum 2 had the rest of the districts. The state sample was divided in the districts based on population proportion

Further division for urban and rural sample size was also done in proportion of population of urban and rural areas in the district.

Details	Number of PSUs
Number of villages	3205
Number of urban wards	1800
Total	**5005**

The sample was distributed based on stratified random sampling and the stratification was done in the sequence mentioned below depending on its nature by residence.

ZONE → STATE → DISTRICT → RURAL/URBAN → HABITATION GROUP

3.2. Sampling Methodology

The sampling methodology involved 3 stages of sampling, both for rural PSU's and urban wards, which is explained below.

Selection of PSUs: After estimating the number of rural and PSUs to be selected within each state and district as explained above, the PSUs were selected using Probability Proportionate to Size Sampling (PPS)

Table A3 gives details of the number of PSUs (villages and wards) sampled in each state.

Selection of Habitation Groups: For both rural PSUs and urban wards investigators formed the habitation groups and selected two randomly. The procedure for this is explained below

(i). For rural PSUs the field investigators ascertained the exact boundaries of the sampled village. The key informant were Gram Pradhan, Sarpanch, Panchayat Members, senior residents, priests, school teachers, or other residents of the village. For urban wards the field investigators ascertained the boundaries of the ward after speaking to key informants in the area such as a officials at Municipal Corporation, DCO representatives, ward members etc.

(ii). After identifying the village/ward, investigators determined whether listing will be done in the entire village/ward or not. In case the present population of the village/ward was found to be more than 600, it was divided into a suitable number of "habitation groups – clusters of houses".

(iii). The breaking of village/ward into habitation groups was done in the following manner:

Procedure for Habitation Group Formation

In a village/ward, there are usually a few localities or pockets where the houses of the village/ward that tend to cluster together. These are called "habitation groups". Geographically distinct clusters of houses were treated as "habitation groups".

1. Identified habitation groups as described above

2. Ascertained the present population of each habitation group

3. Large villages/wards were artificially divided into habitation groups of more or less equal population to spread the sample in the PSU. Habitation group formation was done by using the information and population as follows:

Village/Ward Population	No. of Habitation Groups formed
Less than 600	1
600- 899	3
899-1199	4
1200-1499	5 and so on…

The habitation groups thus formed were done by more or less equalizing the population (i.e., the population in every habitation group was more or less equal).

(i). For each PSU the investigators drew an indicative map showing the approximate location of the habitation group and then number them sequentially from the north-west corner proceeding southwards. While drawing this map uninhabited area and isolated households of the village were included as part of a nearby habitation group

(ii). The boundaries of the habitation groups were defined with the help of some landmark like streets, canals, footpaths, railway lines, roads, etc

(iii). All such habitation groups were listed in the village/ward and also the number of households was noted in the map

(iv). The criteria for habitation group formation were equality of population/number of households and geographical contiguity. In case there was a conflict between the two parameters, geographical contiguity was given priority. However, there was not a substantial difference between the population/number of households of the largest and the smallest habitation group formed

(v). If the number of habitation group in a village was two or more, then it was divided within 2 groups – one, having all habitation groups that have predominantly either Muslim, SC or ST population residing within them and the other having the rest of the habitation groups. One habitation group was selected randomly from each of the two groups so formed

(vi). If any urban ward had a slum area, habitation group of the same was selected with probability 1. All other habitation groups were classified as non-slum habitation groups. Remaining habitation groups was selected randomly from the non-slum households.

Selection of Households in each PSU

(i). Having determined the habitation groups that are to be considered for listing, the next step followed was to list all the households in each of the selected habitation groups.

(ii). From the households so listed, all the households with at least one child in the 6-13 years age group were marked and all the households with at least one disabled child between 6-13 years were also noted. Two strata were formed :

- Stratum 1 : households with at least one child in the age group 6-13 but no child with disability
- Stratum 2: households with at least one child in the age group 6-13 with at least one disability.

The 'Cover Sheet' for Contacts was used for filling in the names of habitation groups, and number of households before starting listing of the households. The 'Contact Sheet' was used for identifying the eligible households (that is, households having children in the age group of 6-13 years). Using this list as sampling frame, circular systematic sampling method was adopted for sampling households which had children in the age group of 6-13 years (date of birth between 1st January 2001 and 1st January 2008).

In all, 20 households were selected from these two strata in every PSU. All the households from stratum 2 were selected for the interview. The balance from 20 was selected from stratum 1 using circular systematic sampling.

The 'Main Schedule' was used for recording information collected from the sampled household.

3.3. Data Collection Program

The data collection part of the survey was for around four months. The maximum time was taken by the North – Eastern states of the country due to ongoing paramilitary activities. Some logistical challenges were faced in Andaman and Nicobar Islands, Lakshadweep, Puducherry.

The survey instruments were drafted in consultation with the Research Evaluation and Studies Unit of Technical Support Group for SSA, EdCIL on behalf of Ministry of HRD. The survey instruments were translated in regional languages by professional translators. Thereafter, the translated versions of the questionnaires were back translated into English by a different translator to ensure error free translations. With translated questionnaires, pre testing was done in Barejadi village in Daskroi Tehsil in Gujarat, Nangli Poona village in Narela Tehsil in Delhi, and one ward each in Kolkata district in West Bengal and Bangalore district in Karnataka.

To get a clear understanding on the logistics the pre testing was done in the same way as the main survey was going to be conducted. For this, 4 interviewers, 4 supervisors, and 4 Field Controllers were trained for two days and 2 researchers accompanied for pilots. All observations during the pre-testing exercise were documented and used at the time of finalizing the questionnaires.

Before training of the survey teams, detailed manuals covering the following topics, was prepared by the researchers. All the necessary documents were received from the client like approval letters, final sampling frames, approval on final questionnaires and sampled PSUs, etc. An extensive briefing/ training session was conducted to make the investigators fully adept at using the Research Instruments as well as the sampling procedures to be implemented in the field. The trainers in turn trained the interviewers and supervisors in local languages at state level. The training dates for the field teams were shared with EdCIL. A close vigil was kept on the training activities to ensure that fieldwork is conducted

in a standardized manner across the country. SRI-IMRB has 15 field offices which gives us a pan India coverage for 35 states and union territories.

Team Structure

In order to finish the data collection in project timelines, many teams (each comprising 4 investigators and 1 supervisor) were trained and deployed for the field work. Therefore, the total staff required for the survey was:

- 304 Investigators
- 76 Supervisors

3.4. Listing and Sampling of the Households

At country level 5, 89,180 households were contacted and information pertaining to the below mentioned items were listed down in a separate contact sheet

- Name of the Head of the Household
- Religion of the head of the household
- Social category of the head of the Household
- Total Number of members
- No. of children in the age group 6-13 years
- No. of disabled children between 6-13 years of the age in household
- No. of children among the age group 6-13 years who are out of school

Out of all the households listed those households were considered to be 'eligible' where there was child/were children among the age group 6-13 years. The data revealed that, at a country level, 43.51% of the households listed were eligible. In rural areas 45.19% of the households' contacted were eligible and in urban areas this proportion was 40.61%. Out of 2,56,228 households which were eligible, at a country level, 39.00% were sampled and selected for the survey. In rural areas 38.03% of the households were selected for the survey out of the eligible households and in urban areas 40.85% of the households were selected for the survey out of the eligible households. (See table A5)

3.5. Quality Control Framework

The Field Controller was primarily responsible for the quality of data collected and had to co-ordinate with the Research Executive on one hand, and with the supervisors, on the other. One of them was in the field throughout the duration of the fieldwork. The Research Manager (RM) closely monitored the entire process of data collection. Each team of investigators was led by a Supervisor who supervised the fieldwork for his/her team. The team leader back-checked/ accompanied 25% of all interviews to ensure that data was collected as per the study requirements. The supervisors also carried out on-field quality checks, apart form 100% spot checks, to ensure data quality. The supervisors also accompanied the interviewers for the main interviews. The supervisor was with the investigator, to see if the investigator was comfortable with the flow of the questionnaire, canvassing the questions as they should be and was recording the responses correctly in about 25% cases.

3.6. Estimation Procedure

Estimation for rural and urban areas was done separately for each of the states following the guidelines provided by the RESU, Technical Support Group, EdCIL. These estimates were then combined to provide overall estimates. The details of the procedure and formulae used for estimation are given in Annexure I.

Table A 5: State - wise Number of Listed Eligible and sampled households

S.No.	State	Rural					Urban					All				
		Contacted	Eligible	Eligible as % of contacted	Sampled	% to Eligible	Contacted	Eligible	Eligible as % of contacted	Sampled	% to Eligible	Contacted	Eligible	Eligible as % of contacted	Sampled	% to Eligible
	CENTRAL ZONE	**32028**	**17291**	**53.99**	**5488**	**31.74**	**8277**	**3602**	**43.52**	**1382**	**38.37**	**40305**	**20893**	**51.84**	**6870**	**32.88**

4.1. Introduction

In this chapter, background characteristics of the sampled households are described. In this survey information as collected on gender, occupation, social group, religion, and education level of head of the household and slum/non slum locations in urban areas.

The following are detailed in thus chapter:

- Gender wise classification of the head of the household.
- Social Group wise classification of the head of the household.
- Occupation wise classification of the head of the household.
- Classification based on the education levels of the household.

4.2. Gender of Head of Household

Head of the household, for this survey, is defined as the person who takes critical decisions with regard to the household. While in some cases, respondents have reported the eldest member of the household as the head of the household, in other cases, the member who contributed most to the family income was treated as the head of the household.

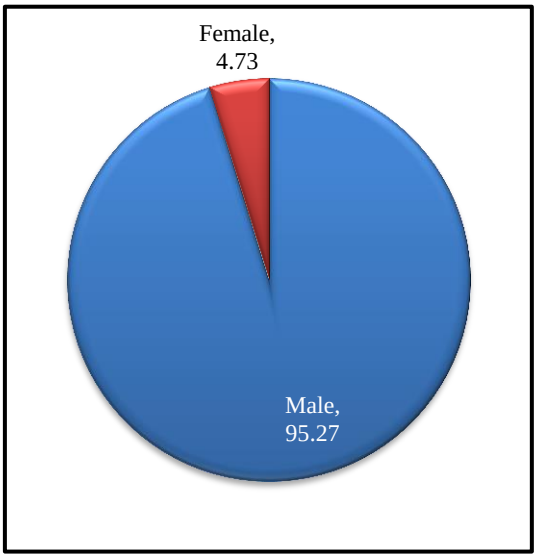

Figure 4. 1: Gender of Head of Household

At national level, it is observed that predominantly males are the head of the household. The findings reveal that in 95.27% of the households the head of the households was a male member and 4.73% of the households were headed by females. This is in line with the customs prevalent in India.

However, in some states/UTs the proportion of female members being reported as heads of the household was much higher than 4.73%. For example, the states such as Meghalaya (36.48%), Lakshadweep (20.74%), and Himachal Pradesh (15.94%) have reported a significantly higher proportion of the households headed by female member. The survey also showed that the proportion of females heading the households was slightly less in rural areas (4.26%) compared to urban areas (5.95%) (See Table B1).

4.3. Social group of the Heads of the household

In the total sample covered in India, 34.25% heads of households classify themselves as belonging to Other Backward Classes (OBC). Scheduled Caste (SC), Scheduled Tribes (ST) and Others stand at 29.61%, 11.99% and 24.15% respectively. Out of a total of 6 zones all over India, OBC population dominates within 3 zones, viz. Central (43.76%), East (33.86%), and South (37.69%). In North and West zone, SC population is the highest (34.12% and 30.04%, respectively), while Others are the highest within the North East Zone at 49.04%.

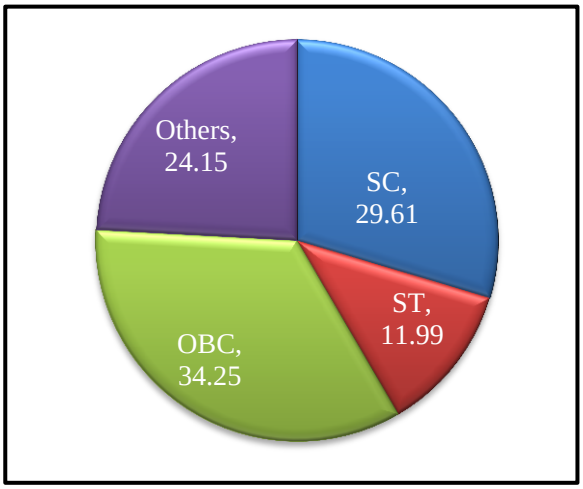

Figure 4. 2: Social Group of Head of Household

Within rural India, 32.95% Heads of Household belong to OBC, and 30.79% belong to SC social group.

Within urban India as well, OBC population is reported to be highest, with 37.65% heads of households belonging to other backward classes, followed by Others at 27.06%. (See table B2).

4.4. Religion of Head of the Household

At the national level, 79.97% heads of household are Hindus, and 16.19% are Muslims, 2.21% are Christians, while 1.64% belong to other religions. Within Rural India, the proportion of Hindus is slightly higher at 82.33%, while Muslims are 14.06%. Urban India reports 73.80% Hindus and 21.75% Muslims.

Zone wise analysis shows that the highest proportion of Hindus is present in the South zone (86.42%), followed by West zone (85.83%), North zone (81.23%), Central zone (80.49%), and East zone (75.15%). North-East zone reports the lowest proportion of Hindus (52.50%). The highest proportion of Muslim population is estimated in the North-East zone (29.09%) and the lowest in South zone (6.68%). With 16.51% Christians the North-East zone has the highest proportion of this religion, followed by South zone (6.81%).

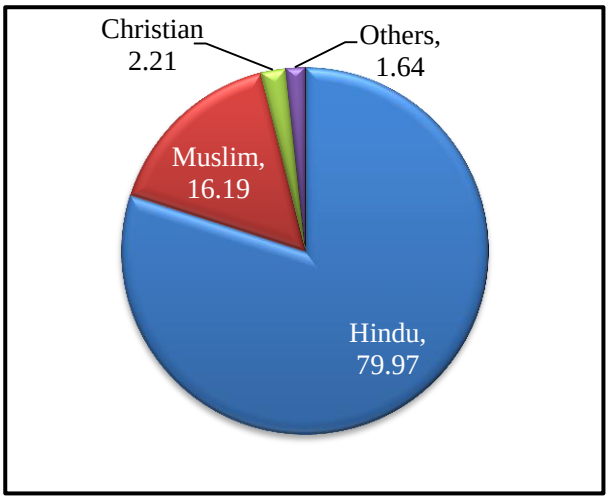

Figure 4. 3: Religion of Head of Household

Nine states, viz. Lakshadweep, Jammu & Kashmir, Assam, West Bengal, Uttar Pradesh, Kerala, Bihar, Jharkhand, and Goa have the estimated Muslim population higher than the national proportion. Highest proportion of 'Others' has been estimated in the state of Punjab and Sikkim with 31.83% and 30.36% HoHs, respectively, classifying themselves of 'Other' religion.

4.5. Occupation of Head of Household

Within the total sample covered, 61.29% depend on agriculture for their living either as labourer or self-employed in the agriculture sector. Dependency on agriculture for a living is higher within rural India where 68.55% HoHs are employed within this sector, as compared to 42.36% in urban India. With 17.54% HoHs working as skilled labourers, it is the most common non-agriculture based occupation. One-quarter of households in urban India have their HoHs working as skilled labourers.

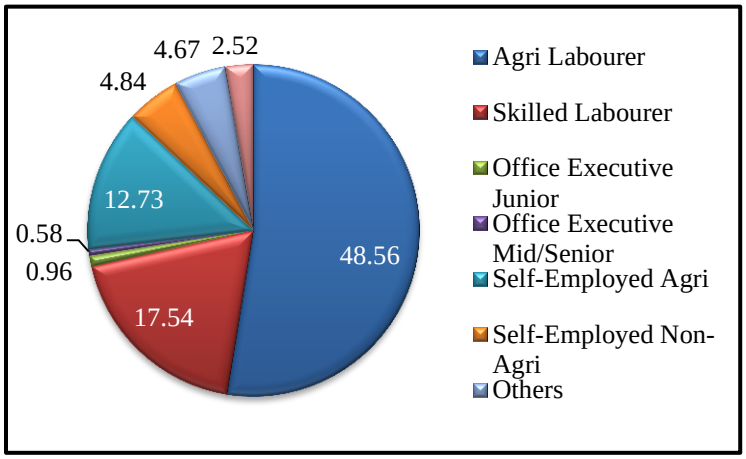

Figure 4. 4: Occupation of Head of Household

Disaggregation at the zone level shows that Central zone is the most dependent on Agriculture for a living with almost 77% HoHs employed within the sector, followed by East zone (71.99%), North zone (53.21%), and West zone (50.98%). The least dependent on agriculture is the South zone (43.47%).

4.6. Education level of Head of Household

In our total sample of respondents, 27.32% of them are non-literate followed by Middle level (19.47%), Secondary (16.41%), Primary (16.00%), Higher Secondary (6.67%), and Literate (6.06%). Only 4.91% of the total sample are graduate and above.

Non-literacy is higher among rural HoHs (29.94%) than urban (20.47%). In Urban classification, put together, 21.05% respondents are educated up to middle level, 19.64% respondents up to secondary level.

Zone wise analysis reveals that the East zone has the most non-literate population with 41.03% HoHs reporting it. This is followed by Central zone (39.26%) and North Zone (21.92%). West zone has the highest proportion of HoHs who are Graduate of Above (9.93%). This is mainly contributed by the state of Maharashtra (13.93%).

Literacy has been almost universally reported in the states Mizoram, Lakshadweep, Dadra & Nagar Haveli, Daman & Diu, Kerala, and Arunachal Pradesh (less than 1% HoHs reported to be Non-Literates)

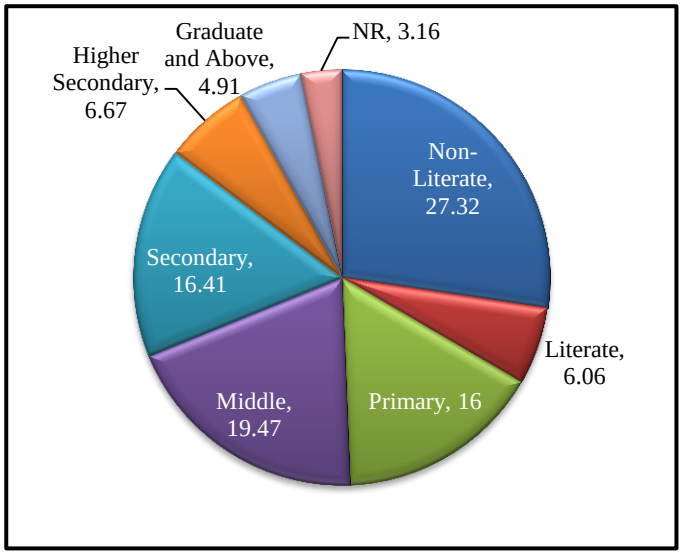

Figure 4. 5: Education Level of Head of Household

4.7. Slum and Non Slum Households

In order to have an adequate representation of the lower strata in this round of the survey, households within slums in urban areas of the country were selected with a higher probability of selection than other households. The rationale was to cover such households in the current study as it was more likely that children who were living in slum areas were not going to school or had never been to school.

Within the urban households surveyed, 48.86% belong to slum areas. Highest proportion of slums is from Maharashtra (71.7%), followed by Karnataka (68.5%) and Tamil Nadu (68.0%).

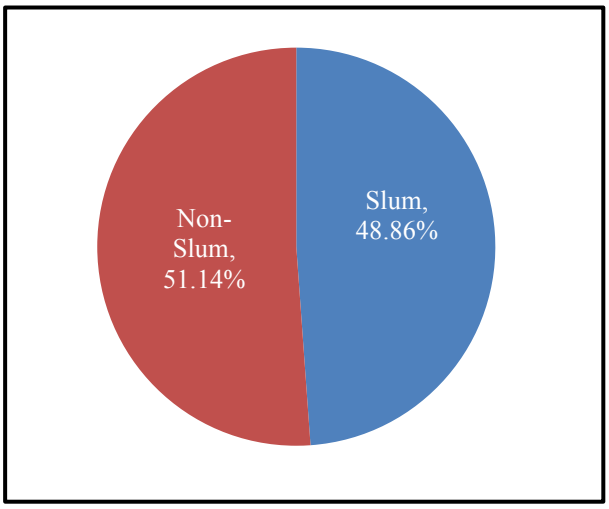

Figure 4. 6: Proportion of Slum Households Covered

The main findings of the survey include total estimated children in the age group 6-13 years, estimated number of in-school children, and schools and classes they are enrolled. This chapter also gives the details of the out-of school children and their characteristics in terms of age, gender, social group, location and analysis by disability. This is followed by analysis of out of school children as never attended and dropouts. This chapter also provides the reasons for being out of school

5.1. Percentage of Out-of-School Children by gender and age group between the ages of 6-13 years

The graph given below provides an overview of the age and gender wise estimated percentage of children who were out of school. It can be observed that relatively more children aged 11-13 years are out of school (3.28% - 26.66 Lakh) compared to children in the age group 6-10 years (2.77% - 33.98 Lakh). The overall percentage of out of school children is 2.97% and their estimated number is 60.64 Lakh.

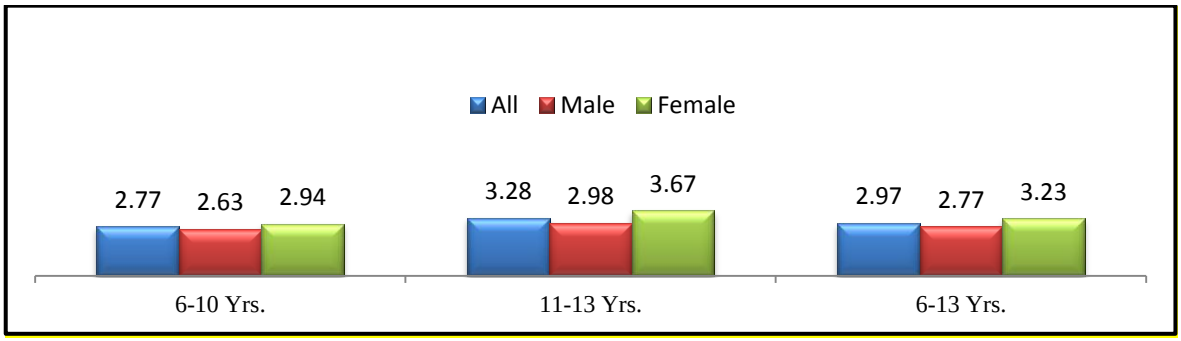

Figure 5. 1: Percentage of Out-of-School Children by gender and age group between the ages of 6-13 years

Disaggregating at the gender level, overall, a higher proportion of female children (3.23% - 28.98 Lakh) are out of school as compared to male children (2.77% - 31.66 Lakh). Within the age group of 6-10 years 2.94% females (15.94 Lakh) are out of school compared to 2.63% males (18.04 Lakh) in the same age group. Between the aged of 11-13, and estimated 3.67% females (13.03 lakh) and 2.98% males (13.63 Lakh) are out of school.

Among zones, East zone reports the highest percentage of out of school children (4.02%), closely followed by the central zone (3.90%). North zone, North East Zone, and West zone have 3.30%, 2.52%, and 1.17% out of school children, respectively. With 0.97%, South zone reports the lowest percentage of out of school children.

The gender dichotomy prevalent within the northern parts of the country is brought out in the estimations from the Northern zone where compared to 4.54% females, only 2.49% males in the age group are estimated to be out of school.

Disaggregating age wise, contrasting to the national trend, where a higher proportion of out of school children belong to the older age group, North zone reports 3.33% out of school children in the 6-10 years age group, compared to 3.26% in the 11-13 years age group. Within the age group of 11-13, East zone

estimates show that more males (5.09%) are out of school as compared to females (4.06%), which is contrasting to the rest of the 5 zones.

State wise, Odisha reports the highest percentage of out of school children in India at 6.10%, followed by Uttarakhand at 5.07%, and Rajasthan at 5.02%. Six more states, Bihar (4.95%), UP (3.90%), MP (3.78%), Chhattisgarh (3.75%), Lakshadweep (3.67%), NCT of Delhi (3.15%) have a higher proportion of children out of school, than the national average (2.97%)

5.2. Percentage of Out of School Children in Rural and Urban areas

At a national level, a higher proportion of children are out of school in Rural areas (3.13% - 46.96 Lakh) as compared to Urban areas (2.54% - 13.68 Lakh). The graph below gives an insight into the rural-urban difference in respect of out of school children.

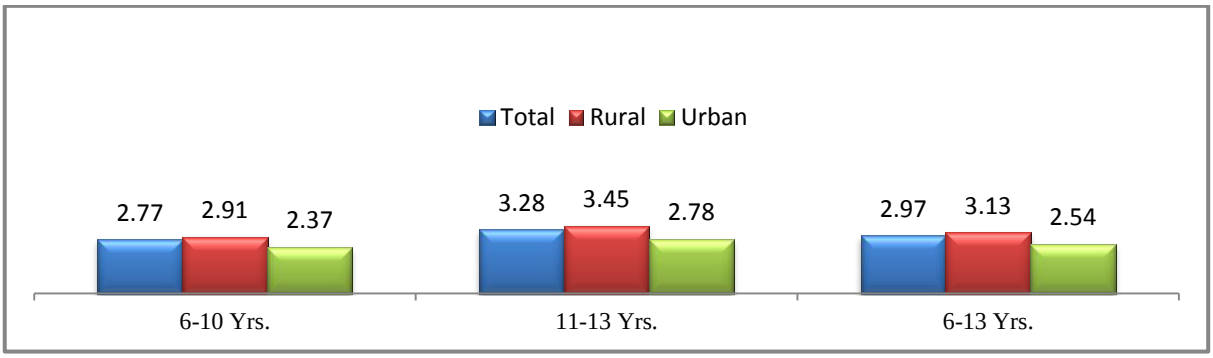

Figure 5. 2: Percentage of Out of School Children in Rural and Urban Areas

A zone level analysis shows that only the central zone reports a higher percentage of out of school children in the urban areas (4.68%) than in the rural areas (3.67%). This is mainly because of the state of Uttarakhand that reports as many as 15.64% children out of school in the age group 6-13 years in the urban areas. Disaggregating further within urban Uttarkhand, a whopping 23.05% girls between ages of 6-10 years are estimated to be out of school. This proportion is 16.93% for 11-13 years aged girls.

5.3. Percentage of Out of School Children from different Social Groups in Rural an Urban Areas

At the national level, the maximum proportion of out of school children in India is within Scheduled Tribes (4.20%), followed by Scheduled Castes (3.24%), OBC (3.07%) and Others (1.87%).

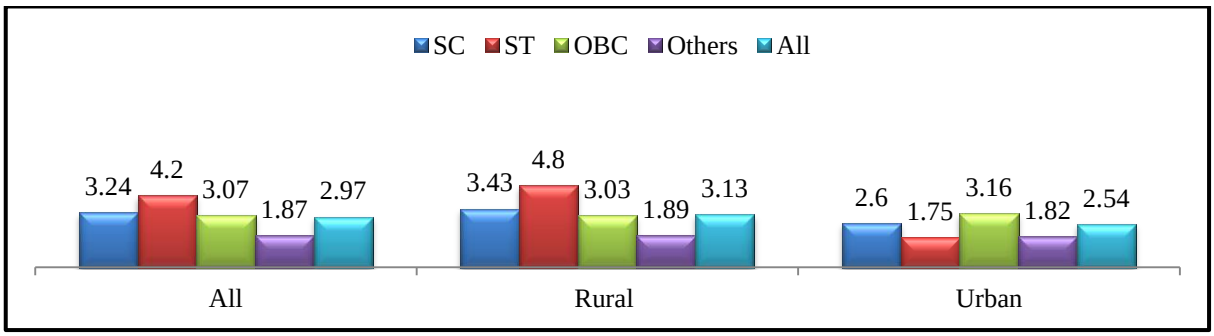

Figure 5. 3: Percentage of Out of School Children from different Social Groups in Rural an Urban Areas

Location wise disaggregation reports a slightly different trend, with 3.16% OBC children out of school, the social group contributes the maximum to the proportion of out of school children within urban India. This is followed by SC (2.60%), Others (1.82%) and ST (1.75%).

A zone level analysis shows that within East zone, 6.78% ST children are estimated to be out of school with maximum contribution from the rural parts of the zone. Disaggregating further, it is witnessed that Odisha, with 14.81% ST children out of school, contributes the most to this proportion of the East zone.

As reported earlier, a very high proportion of out of school children in the urban central zone are from Uttarakhand, Social Group disaggregation reveals that most of them belong to Other Backward Classes (22.46% OBCs are estimated to be out of school in urban Uttarakhand), followed by SC (12.34%).

5.4. Percentage of Out of School Children from different Religions in Rural an Urban Areas

At the national level, Muslims have the maximum proportion of out of school children in India (4.43%), followed by Hindus (2.73%), Christians (1.52%) and Others (1.26%).

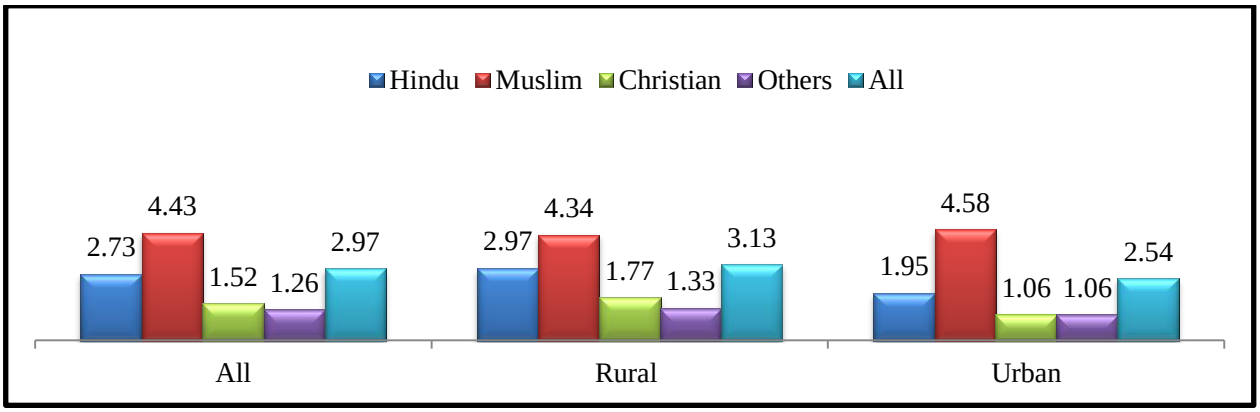

Figure 5. 4: Percentage of Out of School Children from different Religions in Rural an Urban Areas

No difference in the trend is observed from the rural-urban disaggregation. A zone wise analysis reveals that the highest proportion of out of school Muslim children are from central zone (6.12%), followed by the North zone (5.75%). Disaggregating within zones, out of the total estimated Muslim children in Uttarakhand, 13.02% are out of school, followed by MP (10.65%). NCT of Delhi, with 15.76% Muslim children out of school, contributes the most to the total Muslim out of school children in the North zone.

In the East zone the highest proportion of out of school children are among Hindus (4.08%), followed by Christians (3.88%), and Muslims (3.85%).

5.5. Estimation of Children with Special Needs (CWSN) aged 6-13 years

At the national level, an estimated 21.40 Lakhs children in the age group 6-13 years are characterised as CWSN. This translates to 1.05% of the total children in this age group in India. Among the total estimated CWSN, 25.12% are suffering from Orthopaedic Disability, 19.59% from Visual Disability, 16.95% from Speech Disability, and 14.57% from Mental Disability. An estimated 11.81% children among CWSN suffer from more than one type of disability.

Among the total estimated CWSN, 28.07% (6 Lakh) children are out of school. This is much higher than the nation estimated of out of school children (2.97%). Disaggregating by type of disability, 44.13% children suffering from more than one type of disability are estimated to be out of school. Among the children suffering from Mental Disability and Speech Disability, 35.97% and 34.82%, respectively, are out of school.

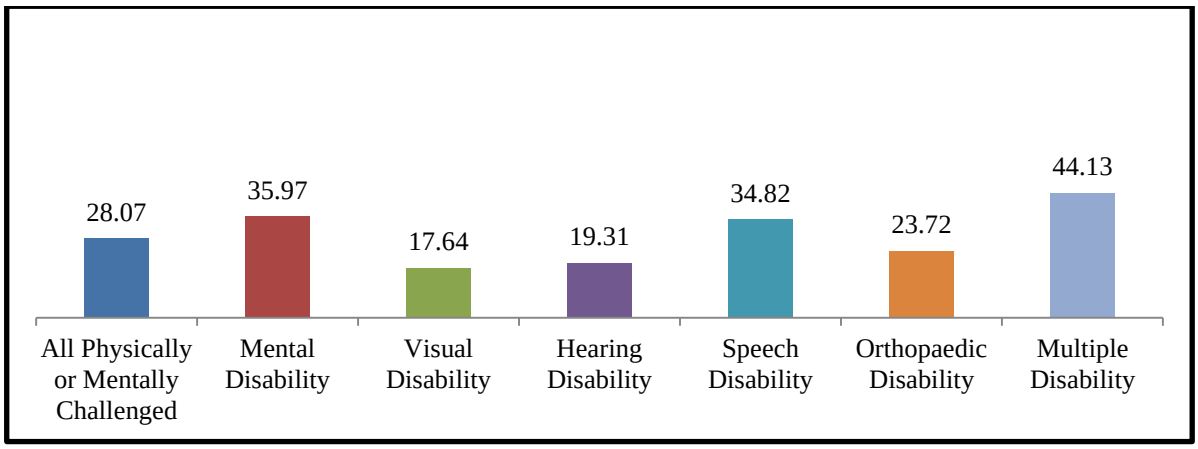

Figure 5. 5: Percent of Out of School Children with Special Needs aged 6-13 Years

Zone wise analysis reveals that 38% of CWSN in the Central zone, 36.27% in the North-East zone, and 35.35% in the North zone are out of school. This proportion is the lowest with West zone where 13.30% of CWSN are out of school.

5.6. Head of Household and Parents' Education wise Out of School Children

Following an expected trend, it is witnessed that as many as 58% of all out of school children come from families with the head of the household is illiterate. Another 21% out of school children come from families where the heads are educated up to primary.

Parents' education was captured in this round to understand its impact on their children being out of school. At an aggregate level, estimations reveal that 28.88% of out of school males and 27.54% out of school females have an illiterate mother, while only 19.57% out of school males and 18.63% out of school females come from illiterate fathers.

5.7. Classification of Out of School Children

Estimated out of school children are further classified as:

5.7.1. **Never Enrolled:** Within the total estimated out of school children, 44.50% (2.70 Lakhs) have never been enrolled in any school (classified under 'Attending' category above). Proportion of Never Enrolled Children is the highest in Central zone (51.41%), followed by the East zone (46.26%), and the lowest within the North-East zone (26.12%).

Disaggregating gender wise, it is observed that at a National level, more males (46.27%) than females (42.55%) have never enrolled in a school.

5.7.2. **Enrolled but Never Attended:** Out of the total estimated out of school children 18.53% (11.24 Lakhs) have been enrolled in some school (classified under 'Attending' category above) but have never attended the same. The proportion of this category of out of school children in the maximum within North zone (38.03%)

5.7.3. **Dropouts:** Those children who have attended school before but are not doing it anymore have been estimated as 36.97% (22.42 Lakhs) of the total out of school children. It is the maximum in the North East zone where 68.88% of out of school children are dropouts

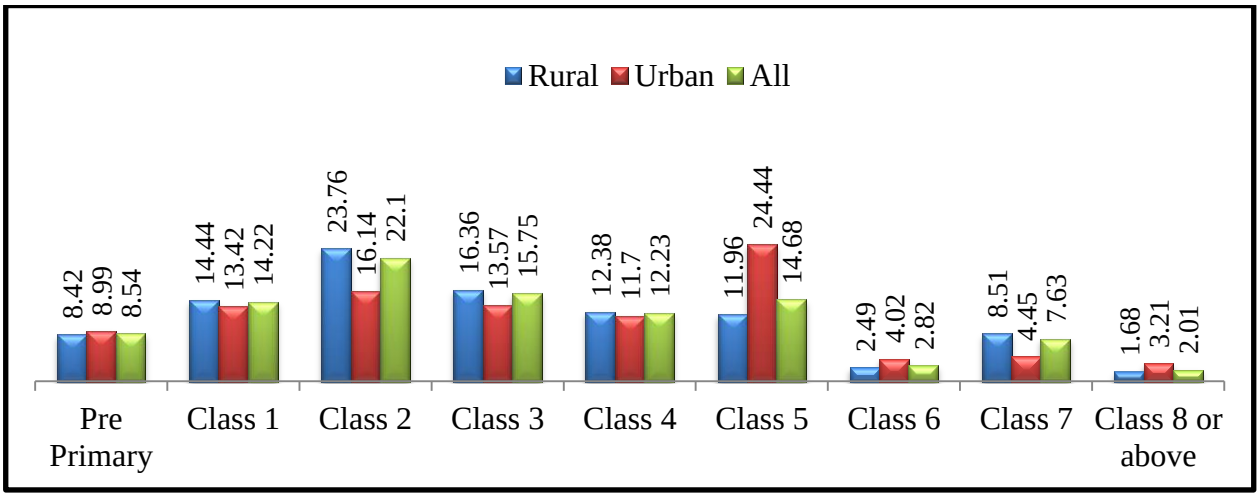

Figure 5. 6: Estimated Percentage of Class wise Dropouts

At the national level, percentage of dropouts in Class-II is the highest with 22.10% followed by Class-III (15.75%), Class-V (14.68%), Class-I (14.22%), and Class-IV (12.23%).

Location wise disaggregation shows that children within the rural areas drop out of school earlier than those in the urban areas. Most of the drop outs in the said age group from the rural areas have completed education up to Class-II, while those from the urban areas have completed class V.

5.8. Estimated Number and Percentage of Out of School Children Living in Slum Areas

The study findings reveal that 36.80% of the children in urban India are living in the slum areas. This translates to an estimated 1.98 Crore children in the age group 6-13 years. Within the children living in slums, an estimated 2.38% (4.73 Lakhs) are found to be out of school. With 2.70% female children from slums not attending school, the proportion of out of school females within slum areas is higher than males (2.14%).

Slums from states such as Uttarakhand (20.34%), Punjab (13.25%), Bihar (11.71%), Assam (8.08%), Madhya Pradesh (7.46%), A&N Islands (6.16%), NCT of Delhi (5.79%), Odisha (4.05%), and West Bengal (3.13%) report a higher proportion of children to be out of school than the National Average.

5.9. Reasons for Being Out of School

When asked about the reason for the child being out of school, Poverty/Economic reason has been reported by 23.76% respondents. This reason is quoted by more dropouts (28.52%), and never enrolled (23.45%), than those who enrolled but never attended school. 'Child not interested in studies' has been reported as a reason for 27.7% dropouts.

A gender wise disaggregation of the reason reveals that a higher proportion of the girls are out of school because of the reason 'needed to help in domestic work or needed to take care of children' as compared to boys. A marginally higher proportion of boys are also out of school than girls for the reason 'child to supplement household income'. 'Education not considered necessary by the head of the household' is also reported by more households with an out of school female child (6.27%) as compared to households with an out of school male child (2.39%).

In urban areas a higher proportion of the children (28.67%) are out of school because of poverty/economic reason as compared to rural areas (22.33%). This is also shown by the fact that as many as 20.74% respondents from urban areas report that their child is out of school because he/she is needed to supplement household income in in the rural areas (9.66%). More respondents report the child's disinterest in studies as a reason for being out of school in case of rural areas (20.24%) than in urban areas (11.99%).

5.10. Percentage of Children Attending Different Type of Schools

Among the total estimated children in the age group of 6-13 years (20.41 Crore), 97.03% (19.80 Crore) are attending school. Among those attending school, 72.39% are attending Government / Local Body Schools and 26.02% are attending Private aided recognized / Private un-aided recognized schools / Recognized Madrassas. A slight decrease in those attending Government / Local Body Schools has been observed from the previous round of the survey where 73.07% children were attending them.

A location wise disaggregation reveals that the proportion of children attending Government Schools in urban areas (55.77%) is far less than those in rural areas (78.40%). As many as 41.67% children attend a private school in urban areas while in rural areas this proportion is 20.36%

At a zone level, 92.33% children in East zone are attending a government school. In the North-East zone 84.87% are attending a government school. This proportion is 77.04% in West zone. Attendees of Private schools are highest within South zone (37.69%), followed by North zone (37.48%), and Central zone (36.03%).

Key Considerations:

- The estimation has been done by assigning weightage to each stage of multistage stratified sampling as per the probability of selection of a sampling unit within that stage
- In this round of the survey, Social Class and Religion have been captured as different indicators and need to be seen in isolation
- In order to have an adequate representation of population within lower strata in this round of the survey, based on the suggestions of the expert committee, priority was given to populations having higher number of out of school children in 2009 (i.e. SC, ST and Muslims). This was done at two stages:
  - **Distribution of number of PSUs within Districts:** To divide the overall state sample among the districts, they were divided as falling within each state in two strata. Stratum 1 had all the districts having SC+ST population greater than 50% of the district total population and Stratum 2 had the rest of the districts. The state sample was divided in the districts based on population proportion

  - **Selection of habitation groups:** If the number of habitation groups in a village were three or more, then they were segregated within 2 strata – stratum one, having all habitation groups that have predominantly either Muslim, SC or ST population residing within them and stratum two, having the rest of the habitation groups. One habitation group was selected randomly from each of the two strata formed within the sampled PSU

- Total two habitation groups were selected in each PSU. If any urban ward had a slum area, habitation groups of the same were selected with probability 1. All other habitation groups were classified as non-slum habitation groups. Remaining habitation groups was selected randomly from the non-slum habitation groups

Nomenclature:

n*	Number of PSUs selected in one district
Zt	Population of the District
j	Subscript for the selected PSU
D_i	total number of habitation groups formed in the i-th PSU (sample village / urban ward
D_i*	1 if Di = 1 Di /2 for PSUs with Di > 1 – since two hgs are selected in a PSU
m	subscript for the eligible house hold having at least one child in 6-13 age group (but no disabled child)
H*	total number of eligible households listed **not having** a disabled child in age group 6-13
h	number of listed eligible households **having** at least one disabled child of age 6-14
h*	number of sampled households **not having** disabled child of age 6-14 (20-h)
Yˆ	estimate of population total for the characteristics y of children belonging to corresponding category

Estimation of number of PSUs

$$\hat{Y} = \frac{1}{n^*} \sum_{j=1}^{n^*} \left(\frac{1}{(Z_{tj}/Z_t)}\right) \times (y_j)$$

Where, yj =1 if sampled PSU possesses the characteristics, otherwise 0.

Estimation of Number of Eligible Households from listing

$$\hat{Y} = \frac{1}{n^*} \sum_{j=1}^{n^*} \left(\frac{D^*_j}{(z_{tj}/Z_t)}\right) \times (y_j)$$

Where yj number of households possessing the characteristic i

Estimation of number of Households from main interviews

$$\hat{Y} = \frac{1}{n^*} \sum_{j=1}^{n^*} \left(\frac{D^*_j}{(z_{tj}/Z_t)}\right) \times \left(\frac{H^*_j}{h^*_j} y_j\right)$$

Where yj number of households possessing the characteristic.

**Tables from the previous round of the study (2009) have been added for reference only. Please refer to the Methodology Section for this round before making any comparisons with previous rounds of the study. The highlighted columns in all tables represent indicators that may not be directly comparable due to a slight change in the survey tool in this round.*
